

# Construction of an oil refinery

Due to the emerging deficit of petroleum products in the Ulytau region, there is a need for the construction of an oil refinery, the primary purpose of which will be the processing of crude oil into gasoline, aviation kerosene, diesel fuel, fuel oil, and other products.

## Project cost.

~ 920 million dollars.

## Project capac:

1 million tons production per year

## Project location

- The village of Borsengir (Ulytau District).

The land area is 100 hectares

Ready industrial infrastructure.

Convenient transport logistics

## Additional information

The issue of constructing an oil refinery with a capacity of 1 million tons of petroleum products has been discussed with Chinese companies. To implement the refinery project, it is necessary to obtain approval from the Ministry of Energy for the required amount of oil, which is 1 million tons. According to information from the Ministry of Energy, it is not possible to allocate this volume of oil due to a shortage of raw materials. As a result, foreign investors have withdrawn from the project. As of the reporting date, work is underway to search for investors and explore other ways to secure the necessary raw materials.

## RAW MATERIAL BASE

Oil

Gas condensate

## Sales markets

КазМұнайГаз  
NATIONAL COMPANY "KAZAKH OIL & GAS"

Export through a single operator.

Provision of the domestic market with petroleum products

## Government support measures.

### For the prophets:

- Provision of land plot – FREE OF CHARGE;
- Exemption from customs duties on equipment imports
- Exemption from VAT on the import of raw materials and materials.

### Other existing types:

- State in-kind grant.
- Reimbursement of costs for connecting production (industrial) infrastructure
